Ordering Instructions

- Determine the number of shelving sections in the shelving run – Find type, number, and depth of shelves required per section.
- Horizontal braces are not needed.
- Shelving sections 3', 4', and 5' long require two uprights, one left and one right.
- Run lengths over 5' require a left and right upright on the ends and a common upright between each section. (as shown in the picture above).

Note

- Upright height (length) is determined by ceiling height.
- Actual shelf depth from the wall to the front of the shelf is 3" more than the listed shelf depth.
- The actual shelving run length is found by adding 6½" to the sum of the shelf lengths in a shelving run — a typical 7' shelving run which uses a 36" shelf length and a 48" shelf length is actually 90½" long (7' 6½").
